Interstate 55 in Cape County Reduced for Bridge Repairs

APRIL 24TH 2017 BY DEE LOFLIN

Interstate 55 in Cape County Reduced for Bridge Repairs

Interstate 55 in Cape County Reduced for Bridge Repairs

Northbound I-55 in Cape County will be reduced to one lane as Missouri Department of Transportation crews perform bridge repairs.

The bridge is located between Route AB and Route 74.

Weather permitting, work will take place Sunday, April 30 at 6:30 a.m. The work zone will be left up overnight and taken down the following morning.

The work zone will be marked with signs. Motorists are urged to use extreme caution while traveling near the area.

For additional information, contact MoDOT's Customer Service Center toll-free at 1-888-ASK-MODOT (1-888-275-6636)

Proffer Named Info Tech Manager for Ambulatory Services

APRIL 24TH 2017 BY DEE LOFLIN

Proffer Named Info Tech Manager for Ambulatory Services

Cape Girardeau, MO - Saint Francis Healthcare System is pleased to announce the appointment of Mark Proffer, BSN, RN, as the new information technology manager for Ambulatory Services.

In this role, he is responsible for the maintenance and optimization of Saint Francis' electronic medical record, Epic, in the physician practices and clinics. Proffer joined the Saint Francis Family in 2004 and has worked as a staff nurse in the Cardiac Intensive Care Unit and was instrumental in the launch of Epic in 2016.

Proffer obtained his bachelor's degree in Bible studies from Amridge University in Montgomery, Ala., and a Bachelor of Science in nursing from Central Methodist University in Fayette, Mo.

Saint Francis Medical Center is a 308-bed facility serving more than 713,000 people throughout Missouri, Illinois, Kentucky, Tennessee and Arkansas. Guided by its mission to provide a ministry of healing and wellness inspired by its Christian philosophy and values, the Medical Center has become a progressive, innovative regional tertiary care referral center. Saint Francis' major service lines, which have received national recognition, include the Neurosciences Institute; Orthopedic Institute; Family BirthPlace, featuring the region's first Level III Neonatal Intensive Care Unit; Heart Hospital; Emergency and Level III Trauma Center; Cancer Institute; and Fitness Plus.

MDC Reports Feral Hog Numbers for First Quarter 2017

MDC Reports Feral Hog Numbers for First Quarter 2017

Trapping, aerial gunning methods prove effective in the first few months of the year.

Jefferson City, Missouri - Missouri Department of Conservation (MDC) wildlife biologists on the feral hog strike team have tallied up feral hog numbers for the first three months of 2017. The first quarter yielded a total of 2,332 feral hogs removed by MDC, partner agencies, and private landowners, which is nearly half of the total number of feral hogs removed in all of 2016.

Southeast Missouri removed a total of 1,124 feral hogs in the first quarter, which is where the highest density of feral hogs occurs. The Ozark region removed 706 while the Southwest region removed 359 feral hogs. St. Louis, Central and Kansas City regions all trapped fewer than 100 feral hogs each. Additionally, in one week, more than 250 feral hogs were removed from the southeast Missouri landscape, all through aerial gunning.

“We’ve built significantly on our progress from 2016,” said Alan Leary, MDC’s Wildlife Management Coordinator and leader of MDC’s feral hog elimination efforts. “We continue to engage private landowners and partners in efforts to report hog sightings, continue trapping and deter hog hunting and the illegal release of hogs, and that’s why we’re seeing growing success.”

In 2016, MDC partnered with other conservation groups, agriculture organizations, and the Missouri Conservation Heritage Foundation to provide the state's feral hog strike team with more trapping equipment for use on both private and public land, and to fund public education efforts on the dangers of feral hogs.

“Because most land in Missouri is privately owned, it’s crucial to engage the public and educate them on the dangers of feral hogs and trapping efforts,” Leary said. “Through ongoing communication efforts, both by MDC and partners, more landowners are learning about feral hogs, asking for help and ridding their property of this invasive species. Examples, such as the one in Taney County where 62 feral hogs were captured in one trap, show landowners that it’s much easier to get rid of feral hogs if you trap the whole sounder, rather than allow hunting and only shooting one or two.”

Feral hogs are not wildlife and are a serious threat to fish, forests and wildlife as well as agricultural resources. Economic losses resulting from feral hogs damage in the U.S. is estimated at greater than \$1.5 billion per year. Feral hogs damage property, agriculture,

and natural resources by their aggressive rooting of soil in addition to their trampling and consumption of crops as part of their daily search for food.

Feral hogs have expanded their range in the U.S. from 17 to 38 states over the past 30 years. Their populations grow rapidly because feral hogs can breed any time of year and produce two litters of one to seven piglets every 12 to 15 months. Feral hogs are also known to carry diseases such as swine brucellosis, pseudorabies, trichinosis and leptospirosis, which are a threat to Missouri agriculture and human health.

To report feral hog sightings or damage, go online to mdc.mo.gov/feralhog.
